

Growing and Changing

Subject Specific Vocabulary		Associated Diagram	Sticky Knowledge
Cocoon ICT will be used to research information	A Cocoon is a silky covering that caterpillars shelter inside whilst they grow and change.		I know that a cocoon is what a caterpillar makes to go inside. I know when it comes out it's a butterfly.
Butterfly Tongue	A Butterfly's tongue is like a straw and they use this to suck nectar from flowers.		I know that a butterfly uses its tongue to collect food called nectar. I know a butterfly can lay 100's of eggs. I know that after 3 days a caterpillar hatches out of the egg.
Antennae	Antennae help insects to find food, touch things and taste things.		I can remember the word antennae and that butterflies and ladybirds have them to help them feel and taste things.
Eggs	A butterfly can lay between 100 and 300 eggs and they can take around 3 days for a caterpillar to hatch out of them.		I know that a plant's roots grow under the ground. I know roots are used by the plant to suck water and food from the ground.
Roots	Plants need roots to suck food and water up from the ground to feed the plant.		I know that plants need roots or they would fall over. I know that they can bend towards the sun.
Stem	Plants need stems to keep them upright. They also bend so the leaves can always stay in the sun.		I know that leaves on green plants can make their own food using the sunlight.
Leaves	Leaves have a special job as they use the sunlight to make their own food.		Key : Geography History Science ICT
